Anatomy improv'd and illustrated with regard to the uses thereof in designing; not only laid down from an examen of the bones and muscles of the human body, but also demonstrated and exemplified from the most celebrated antique statues in Rome. Exhibited in a great number of copper plates, with all the figures in various views. Intended originally for y<sup>e</sup> use of the Royal French Academy of painting and sculpture, and carried on under the care and inspection of Charles Errard, director of the same in Rome. The dissections made by . . . Ber<sup>o</sup>. Genga . . . the explanations and indexes added by . . . John Maria Lancisi . . . A work of great use to painters, sculptors, statuary, and all other students in the noble arts of designing. First published at Rome by Dom di Rossi, and now reengraved by the ablest hands in England, and republish'd by John Senex. fol. *London*, [1723].
